

Press Release

CAPS to open new offices in China

Rennes, April 13, 2010

CAPS entreprise expands into Asia Pacific with the opening of new offices in Shanghai, China.

Bolstered by its success in Europe with major companies in energy, oil & gas, defense and research, CAPS has started its internationalization in 2009 by signing new partnerships with American and Asian High Performance Computing actors.

Founded in April 2002, CAPS has been developing for more than 7 years manycore programming tools. CAPS is now a leading global provider of compiler technologies and engineering services for parallel hybrid computing.

This new office opening in Shanghai reinforces its local presence in APAC first initiated in 2009 by new reselling agreements with supercomputing specialists in Japan and Taiwan. Several organizations, computing centers, universities and industrial companies are currently evaluating HMPP™, CAPS hybrid compiler.

“ This new Shanghai office opening reaffirms CAPS commitment to this rapidly expanding market. We are proud to deliver our APAC customer the same level of services than in Europe”, declares Benoît Raoult, CAPS APAC VP and General Manager, “Sharing our GPU computing experience is our goal when setting up in China”.

There is undeniably a growing interest in the APAC region for hybrid computing and CAPS is well positioned to provide developers with the skills and technologies they need to be successful. This new local presence in China will enable CAPS to provide clients with local market expertise and to strengthen ties with its reseller network throughout the Asia market.

About CAPS entreprise

CAPS is a major supplier of solutions dedicated to application deployment on manycore processors with a focus on GPUs. CAPS develops HMPP™ (Heterogeneous Multicore Parallel Programming), a hybrid compiler that gives developers an easy access to manycore systems and offers services ranging from manycore parallel programming trainings to complete application porting and expertise.
